

DECLASS REVIEW by NIMA/DOD

28 August 1961

MEMORANDUM FOR THE RECORD

STATINTL

SUBJECT: Trip Report - [REDACTED]

1. Friday, 25 August, [REDACTED] was visited by the above named and all so specified contracts were turned over to [REDACTED] STATINTL

2. Attention is drawn to the fact that the two contracts to be monitored by [REDACTED] will be in need of action very soon:

✓ a. 2X Reduction Printer: The printer will be ready for inspection Labor Day week. This fact should be confirmed on Friday, 1 September 1961. Two days should be allotted to this task.

✓ b. Two Stage Rectifier: The rectifier scheduled for the Army will be ready for inspection the last week in September. At least two days should be allotted for this task. STATINTL

Both of the above should be inspected in conjunction with [REDACTED]

3. Nine microscopes were inspected and returned to Washington.

4. Seven Zoom Microscopes were returned to Washington. Inspection served in good stead here since the Company had packed the wrong pods. By the time this was squared away time did not permit inspection of the proper pods. However, [REDACTED] will inspect them Monday, 28 August, and will return rejects, if any, on his next visit.

5. Zoom 70 Stereo Microscopes Uncoupling Mechanism. (A device which will allow different magnifications on either eyepiece to handle different scale stereo pairs.) [REDACTED] is handling this on their own and in three to four weeks will have a prototype. They propose to furnish retrofit kits which will allow any of our present microscopes to be modified simply by drilling two holes and changing two gears. After the prototype is approved, the kits will be available four weeks after order.

6. The large light table was discussed. The old table has been salvaged and reassembly has just started. Prototype #2 will be ready for inspection in November. It is recommended that a close inspection schedule be followed for this device. That is: second week of September, first week of October, fourth week of October, first week of November and third week of November.
